

Role of Tourism in Sustainable Development of the Western Ghats

Deepak Yadav

Department of Geography, D.B.S. College, Kanpur

Abstract

The western ghats, which is one of the eight hottest biodiversity hotspots in the world, is vital in ensuring that the India ecology is balanced. The region boasts of abundant natural and cultural heritage, which has made it a major tourist destination experience by both local and foreign tourists. The potential of the Western Ghats in terms of sustainable development through offering job opportunities, supporting local entrepreneurship and increasing environmental awareness is very vast. Unregulated tourism however presents grave challenges in form of deforestation, pollution and degradation of culture. The paper will focus on the two-sidedness of tourism as an economic growth determinant and a possible environmental imbalance. It discusses the role of sustainable tourism practices, including community-based ecotourism, responsible tourism practices and proper policy execution in bringing about harmony between development and conservation. The research comes to the conclusion that the balanced strategy, including the local input, environmentally-friendly infrastructure, and tough regulatory measures, is needed in order to make the tourism in the Western Ghats sustainable in the long-term.

Keywords: Western Ghats, Sustainable Development, Ecotourism, Environmental Conservation, Community Participation, Responsible Tourism

Introduction

The Western Ghats being a stretch along the western coast of India that stretches between Gujarat and Kerala is considered to be one of the most ecologically sensitive and biologically diverse regions across the world. It is a mountain range that is recognized as a UNESCO world heritage site and is home to thousands of endemic species of flora and fauna. It is also the lifeline of millions of people because it affects the monsoon patterns, fresh water, as well as agriculture and livelihoods. Tourism has over the past few years become a significant economic activity in this region attracting visitors by its scenic landscapes, wild animals and eleanor hill stations and cultural heritage.

Tourism of the western Ghats can make a great contribution to the sustainable development - a pattern of development that fulfills the needs of the present generation without negating the capacity of the future generation to fulfill their needs. Sustainable development focuses on balancing between economic growth and social inclusion as well as conservancy of the environment. When done in a responsible manner, tourism can be a major tool in taking up this balance. It is able to foster the local jobs, conserve the old cultures and raise funds to be used in conservation projects.

Nonetheless, tourism is a two-sided sword. Although it has the potential to boost the local economies, unplanned and excessive tourist activities may also destroy the vulnerable ecosystems of the Western Ghats. The most obvious effects of unregulated tourism include deforestation in the resort areas, plastic pollution, water pollution and disruption of wildlife. Thus, to realize the role of tourism in sustainable development, it is important to critically analyze how tourism could be used as positive power and not a destructive power.

Western Ghats: Ecology and Culture.

The Western Ghats covers about 1,600 kilometers in six Indian states, namely, Gujarat, Maharashtra, Goa, Karnataka, Kerala, and Tamil Nadu. They geographically create the watershed of numerous significant rivers like the Godavari, Krishna, and Kaveri which are essential in the agricultural and economic well being of the peninsular India. The ecological population of the area contains more than 7,000 plant species, 500 species of birds, and a number of endangered animals such as the lion-tailed macaque, Malabar civet, and Nilgiri tahr.

The Western Ghats are rich culturally with ancient temples, tribal societies, traditional farming and folk traditions that indicate a peaceful coexistence of man and nature. The forests and rivers have been the source of livelihood of the local people, as they have engaged in sustainable agricultural practices, fishing, and forest management systems over the centuries. Most of these communities have also discovered new sources of livelihoods as a result of the emergence of tourism including homestays, eco-guiding, handicrafts and cultural performances.

However, modernization and commercial tourism have also left this balance. Habitat fragmentation and pollution have been caused by the building of massive resorts, uncontrolled trekking trails and the high influx of mass tourists. The increasing conflict between economic growth and environmental conservation is the core of the sustainability dilemma of Western Ghats.

Sustainable Development and Tourism:

When done in a sustainable manner, tourism can be used as the instrument of conservation and inclusive development. Sustainability tourism pays attention to reducing the negative effects on the environment in favor of the socio economic factors to the locals. It helps travelers to appreciate local culture, utilize resources properly and help protect the environment.

Eco-friendly tourism projects, including wildlife parks, nature walks and community based homestays have already shown positive results in the Western ghats. They also offer an alternative to exploitative industries such as mining and logging which leave a more stable and moral source of income to the local people. In addition, tourism will be able to promote the need to protect biodiversity and motivate policy makers to invest in conservation facilities.

The trick though is balancing this delicate situation. In absence of good governance, awareness, and involvement of the community, tourism can become a threat instead of an opportunity. Thus, the role of tourism in sustainable development is not only the encouragement of traveling but rather the fact that all the elements of tourism will contribute to the long-term ecology, cultural integrity, and economic stability of the Western Ghats.

The Western Ghats sustainable tourism seeks to balance the growth of tourism with the protection of the environment and the wellbeing of the community. There has also been an increasing trend of mass tourism moving towards the models of eco-friendly and community based tourism that focus on low impact tourism and welfare of the local people. Different states such as Kerala, Karnataka and Maharashtra have started having eco-tourism projects, which entail the participation of locals, which create awareness and conservation of biodiversity.

Community-based ecotourism (CBET) is one of the major practices of sustainable tourism. According to this model, homestays, trekking routes and cultural programs are operated by the local villagers with most of the economic gains remaining in the society. To illustrate, there is the Periyar Tiger Reserve in Kerala, where local guides and eco-development committees have been active in the protection of forests, tourism services, and the rainforest research and responsible visitor management at Agumbe in Karnataka. Not only have these efforts helped in generating income, but also in making the locals feel a sense of ownership and environmental responsibility.

Environmentally responsible infrastructure is another valuable point. Most of the eco-resorts in the Western Ghats employ renewable sources of energy, water recycling, and locally available materials to lower their ecological foot print. Trekking trails and camping sites are also implementing the principle of leave no trace in such a way that they cause minimal impact to the environment. Moreover, educational tours and awareness campaigns are also arranged to educate tourists on the local biodiversity, conventional ways of farming, and the conservation.

The NGO and government intervention has also played a significant role. The use of the Incredible India campaign by the ministry of Tourism and state based programs such as the Kerala program of Responsible Tourism Mission have helped the concept that tourism is not solely about sightseeing but also about sustainability. The NGOs like the Western Ghats Ecology Centre have been instrumental in training the locals and in coming up with environmentally friendly tourism models.

Sustainable tourism, however, does not simply refer to the environmental practices-performance but also ethical and cultural sensitivity. The tourists will be advised to observe local culture, minimize waste, and buy local products rather than those that have been produced in large quantities. Longer stays and greater immersion in the local culture is the subject of the emerging trend of slow tourism, and this has been well received by the Western Ghats, which leads to positive effects on sustainability.

Economic Implication of Tourism on the Western Ghats.

The Western Ghats have come out as a regional region where tourism has become an important pillar of their economy. It creates jobs, encourages local entrepreneurship, and makes large contribution to the GDP of the states due to hospitality, transport, handicrafts, and agriculture. Regional tourism departments claim that tourism is a vital source of livelihood in the rural and

semi-rural regions since thousands of families rely on the tourism-related activities directly or indirectly.

Employment Generation:

Tourism opens a variety of working positions: guides, drivers, hotel employees, craftsmen, small sellers all these people enjoy the arrival of visitors. As an example, tourism related services such as Seven seasons make up a significant part of the local population income in the hill station of Munnar, Coorg, and Mahabaleshwar. Women especially have accessed new opportunities through the handicraft, traditional food and management of homestay which has increased financial independence and empowerment.

Publicity of Local Business:

Eco-tourism has spurred the development of small business ventures like organic farms, local food cafes, outlets of eco-products and eco-lodges. These enterprises are usually operated by the local families and cooperatives and in such a way that the profits are recirculated into the local economy instead of being drained by the large corporations. This model facilitates inclusive growth and it lowers the rural-urban migration as people are employed at the lower level.

Infrastructure Development:

The development of tourism has also contributed to the better infrastructure including better roads, communication and common facilities in isolated hill areas. Even though this type of infrastructure serves the interests of the tourist, it also enhances the lifestyle of the immediate community by making quality education, health care, and markets available to them.

Cultural Revival and Social Benefits:

Tourism has the effect of maintaining and advancing the rich culture of the Western Ghats. Tourism has helped to become visible and appreciated by local art forms, festivals, traditional dances and handicrafts. This cultural re-awakening effectively creates a sense of belonging within a community as well as creating pride among the younger generation thus encouraging them to preserve their cultures.

Nevertheless, there has to be a balance of economic benefits against environmental costs. In certain regions, excessive commercialization has contributed to increasing the cost of living, pressure on land and inequality. Thus, there should be sustainable planning and regulation that will guarantee the economic development cannot jeopardize environmental and social sustainability.

Striking a balance between Growth and Conservation.

The real potential of tourism is the fact that it could bring up a synergistic relationship between development and conservation. Western Ghats has the potential to become a global model of sustainable tourism when there is a collective responsibility or shared responsibility between the stakeholders (government, local communities and tourists). Besides the capacity to boost

the economy, sustainable tourism promotes success and sustainability of the natural resources and the heritage.

Through ecological sensitivity incorporated in the tourism policy, the adoption of green technologies and the focus on local interaction, the Western Ghats will manage to develop a prototype of the development that will accommodate both humans and nature.

Challenges and Threats to Sustainable Tourism

Although tourism has a huge potential in terms of sustainable development of the Western Ghats, there are a number of challenges that it poses to the fragile ecological and cultural environment of the region. Several problems, including environmental damage, litter and biodiversity loss have been caused by the unchecked development of unregulated tourism. Hotels and resorts are also constructed in areas with a weak ecological condition, which leads to deforestation, soil erosion, and water pollution. An over use of plastic and poor disposal of waste materials as well as high motorized transport increases river and forest pollution.

Another issue that is on the rise is over-tourism. Popular resorts such as Munnar, Coorg as well as Lonavala have been overcrowded seasonally and this puts pressures on the infrastructure and resources of the localities. This interference with the habitat and the natural regeneration cycle of the ecosystem is caused by this uncontrolled influx. Besides, the problem of the land and construction has resulted in the encroachment into forests and agricultural lands.

The menace of cultural degradation is also a severe threat. Traditional art forms and rituals are usually commercialized to attract tourists, which in most cases, results in loss of authenticity. The local people, under the pressure of trying to meet the demands of the visitors, also tend to change their traditions, which makes the cultures less intact with time.

Policy implementation and coordination is also another significant challenge. Sustainable tourism policies are poorly enforced since no one is monitoring them and the government is not funding them enough, as well as the community is not involved in these activities. The failure to have a coherent management framework in the various states in the Western Ghats also makes matters of sustainable planning very difficult.

Finally, there is the dimension of climate change that has provided an added layer to the problem. The ecological well-being of the area is jeopardized by the irregularities in the rainfall and landslides, as well as the shift in temperature, which makes the sustainability of the touristic practices even more sharp and significant.

Government Policy and Government Initiatives.

With the identification of these issues, both the central and the state governments have initiated a number of programs to facilitate sustainable and responsible tourism in the Western Ghats. Sustainable Tourism Criteria by the Ministry of Tourism in India (STCI) offers a guideline on the development of environmentally friendly tourism and pays attention to energy conservation, waste disposal as well as the well-being of the community.

On the state level, the Responsible Tourism Mission of Kerala is one of the examples of tourism and sustainability integration. It focuses on local involvement, evenly shared economic

opportunities, and limited environmental damages. On the same note, the Jungle Lodges and Resorts (JLR) program in Karnataka is a way of encouraging eco-tourism within wildlife reserves and at the same time securing employment to the locals and conservation.

The policy of Eco-Tourism in Maharashtra (2017) and the work of Tamil Nadu in community-managed eco-parks also demonstrate the increased value of green tourism approaches. Also NGOs and research organizations such as the Ashoka Trust for Research in Ecology and the Environment (ATREE) have played a vital role in ensuring that they conduct studies and training to the local communities on conservation based tourism creation.

Nonetheless, the success of the policy relies on the implementation at the ground level. These policies are not effective without constant supervision as well as the participation of the public-private partnership and awareness efforts. The participatory strategy with the involvement of local stakeholders is indispensable in the distribution of tourism benefits on a fair basis and environmental boundaries are considered.

Recommendations

The following recommendations could be implemented to enhance the importance of tourism in the sustainable development of the Western Ghats:

- Endorse the local communities to regulate tourist activities in a manner that the economic gains do not leave the region but instead the cultural and the natural heritage are maintained.
- Conduct scientific investigations to establish the number of tourists that a destination can be able to support without damaging the ecosystem.
- Instigate more strict actions against garbage dumping, building and land-use alteration in the ecologically sensitive areas.
- Hold campaigns to inform tourists on the eco-friendly behaviour and promote responsible travel.
- Invest in long-lasting infrastructural development, like renewable energy systems, effective waste management, and environmental certified accommodation.
- Enhance the cooperation of the government agencies, NGOs and the privates with the goal of promoting the standards of sustainable tourism and certification programs.
- Implement an ongoing monitoring mechanism of environmental and social effects of tourism and revise strategies based on the study outcomes.
- Embrace climate adaptation planning in tourism planning in order to lessen impacts of climate change on natural ecosystems.

With these suggestions in place, tourism will be able to become the driver of sustainable development - the one that will not only maintain the ecological richness of the Western Ghats but also sustain the ambitions of the locals.

Conclusion

The Western Ghats are at a crossroad in terms of tourism; it has not only brought prospects of prosperity, but also the chances of irreversible ecological destruction. When managed properly,

it can be a very useful source of sustainable development, which can help in economic growth, preservation of cultures, and conservation of the environment. Sustainable tourism is not limiting the travel but encouraging the practices which enable the nature and culture to flourish with the growth.

The unique biodiversity and cultural heritage of the Western Ghats can serve as an ideal model to test such a strategy. Through the adoption of community-based tourism, being strict with regard to environmental regulations and nurturing the ecological consciousness, the region will be able to establish the balance between the needs and demands of people and the preservation of nature. Finally, responsible tourism will not only help in the preservation of this ecological treasure, but also emulate other projects in the world by promoting sustainable development of the Western Ghats.
